# HIBERNIA COLLEGE DUBLIN

## Computing

**Tutor :** Kevin O'Brien

**Tutorial:** Maths for Computing

## **Section 7 Sequences, Series and Proof by Induction**

- Sequences
- Series
- Proof by Induction

**2001**

## Question 9

- (a) Calculate the terms  $u_3$  and  $u_4$  of the sequence defined for  $n \geq 2$  by the recurrence relation

$$u_{n+1} = u_n + 3u_{n-1},$$

when  $u_1 = 1$  and  $u_2 = 4$ .

**2001**

## Question 9

- (a) Calculate the terms  $u_3$  and  $u_4$  of the sequence defined for  $n \geq 2$  by the recurrence relation

$$u_{n+1} = u_n + 3u_{n-1},$$

when  $u_1 = 1$  and  $u_2 = 4$ .

**2002**

Question 8 (a) A sequence is defined by the recurrence relation

$$x_{n+2} = 3x_{n+1} - 2x_n$$

and initial terms and  $x_1 = 1$  and  $x_2 = 3$ .

(i) Calculate  $x_3$  and  $x_4$ , showing your working. [2]

**2001**

(b) For each of the following sequences, find a recurrence relation that gives  $u_{n+1}$  in terms of  $u_n$ .

(i) 12, 1.2, 0.12, 0.012, 0.0012, ...;

(ii) 3, 7, 11, 15, 19, ....

[2]

## Section 7 Sequences, Series and Proof by Induction

- Series

**Theorem 2.1** *Let  $n$  be a positive integer. Then*

$$(a) \sum_{r=1}^n 1 = n.$$

$$(b) \sum_{r=1}^n r = n(n+1)/2.$$

$$(c) \sum_{r=1}^n r^2 = n(n+1)(2n+1)/6.$$

$$(d) \sum_{r=0}^n x^r = \frac{x^{n+1}-1}{x-1}, \text{ for any } x \in \mathbb{R} \text{ with } x \neq 1.$$

**2001**

(c) Use the formula  $\sum_{r=1}^n r = n(n+1)/2$  to evaluate the following sums.

(i)  $1 + 2 + 3 + \cdots + 100;$

**2001**

$$(ii) \ 21 + 22 + 23 + \cdots + 100; \quad [2]$$

**2001**

$$(iii) \ 5 + 10 + 15 + 20 + 25 + \cdots + 100.$$

11

[2]

## Section 7 Sequences, Series and Proof by Induction

- Proof by Induction

### The 3-step method of Proof by Induction

**Base case** *Verify that the result is true when  $n = 1$  so that  $1 \in S$ .*

**Induction hypothesis** *For some arbitrarily fixed integer  $k \geq 1$ , assume that the result is true for all the integers  $1, 2, \dots, k$ .*

**Induction step** *Use the hypothesis that the result is true when  $n = 1, 2, \dots, k$  to prove that the result also holds when  $n = k + 1$ .*

**2002**

(ii) Prove by induction that  $x_n = 2^n - 1$  for all  $n \geq 1$ . [6]

**2002**

(b) Evaluate  $\sum_{n=1}^{50} (5n - 2)$ .

[2]

**2003**

**Question 7** (a) A sequence is given by the recurrence relation

$$u_{n+1} = u_n + n \text{ and } u_1 = 0.$$

(i) Calculate  $u_3$ ,  $u_4$ , and  $u_5$ . [2]

**2003**

(ii) Use induction to prove that

$$u_n = \frac{n(n-1)}{2} \text{ for all } n \geq 1.$$

[5]

**2003**

(b) Write the following in  $\sum$  notation

$$1 + 4 + 7 + 10 + \dots + (3n - 2).$$

Evaluate this when  $n = 100$ .

[3]

2004

**Question 6** (a) Consider the sequence given by  $1, 4, 7, 10, 13, \dots$

State a recurrence relation which expresses the  $n$ th term,  $u_n$ , in terms of the  $(n - 1)$ th term,  $u_{n-1}$ . [2]

**2004**

(b) Another sequence is defined by the recurrence relation  $u_n = u_{n-1} + 2n - 1$  and  $u_1 = 1$ .

(i) Calculate  $u_2, u_3, u_4$  and  $u_5$ .

(ii) Prove by induction that  $u_n = n^2$  for all  $n \geq 1$ .

2004

(iii) Find the sum of the first 50 terms of this sequence.

*You may assume the formula for  $\sum_{k=1}^n k^2 = \frac{n(n+1)(2n+1)}{6}$ , [8]*

2005

**Question 5** Let the sequence  $u_n$  be defined by the recurrence relation

$$u_{n+1} = u_n + 2n, \quad \text{for } n = 1, 2, 3, \dots \text{ and } u_1 = 1.$$

(a) Calculate  $u_2$ ,  $u_3$ ,  $u_4$  and  $u_5$ , showing all your working. [2]

**2005**

(b) Prove by mathematical induction that the  $n$ th term, where  $n \geq 0$ , is given by

$$u_n = n^2 - n + 1.$$

[5]

**2005**

(c) Showing all your working, find the sum of the first 100 terms of this sequence.  
[3]

2006

Question 3

- (a) (i) Write down the first three and last three terms of the series given by

$$\sum_{k=1}^{33} (3k - 1).$$

- (ii) Write the terms of this sequence as a recurrence relation that gives  $u_{n+1}$  in terms of  $u_n$  and give the value of the initial term. [3]

**2006**

(b) Write the following series in  $\sum$  notation:

(i)  $2 + 5 + 8 + \dots + 200$

(ii)  $101 + 104 + 107 + \dots + 299$ .

Use the formula  $\sum_{k=1}^n k = \frac{n(n+1)}{2}$  to evaluate the first of these two sums. [4]

2006

- (c) It can be proved by induction that the series  $3 + 7 + 11 + \dots$  has the sum to  $r$  terms given by  $S_r$ , where

$$S_r = 2r^2 + r.$$

Use this result to evaluate the following sums:

(i)  $3 + 7 + 11 + \dots + 399$

(ii)  $403 + 407 + 411 \dots + 999.$

[3]
