Properties of Functions

The function $f : \mathbb{R} \rightarrow \mathbb{Z}$ is defined by the rule:

$$f(x) = \left\lfloor \frac{x}{2} \right\rfloor$$

Properties of Functions

The function $f : \mathbb{R} \rightarrow \mathbb{Z}$ is defined by the rule:

$$f(x) = \left\lfloor \frac{x}{2} \right\rfloor$$

What is the range of this function?

Properties of Functions

The function $f : \mathbb{R} \rightarrow \mathbb{Z}$ is defined by the rule:

$$f(x) = \left\lfloor \frac{x}{2} \right\rfloor$$

Is this function “onto” ?

Properties of Functions

The function $f : \mathbb{R} \rightarrow \mathbb{Z}$ is defined by the rule:

$$f(x) = \left\lfloor \frac{x}{2} \right\rfloor$$

Is this function “one-to-one” ?

Properties of Functions

The function $f : \mathbb{R} \rightarrow \mathbb{Z}$ is defined by the rule:

$$f(x) = \left\lfloor \frac{x}{2} \right\rfloor$$

Is this function invertible ?
